

ON THE 65TH BIRTH ANNIVERSARY OF RNDr. OTO FUSÁN, DrSc., MEMBER-CORRESPONDENT OF SLOVAK ACADEMY OF SCIENCES

In March of this year the outstanding Czechoslovak geologist Oto Fusán celebrated his 65th birth anniversary.

Dr. Fusán was born on March 30, 1922 in a miner's family in a small village Dolná Turecká near Staré Hory. He visited elementary school in his native place and in 1941 graduated at the high school in Banská Bystrica. In the same year Dr. Fusán entered the Comenius University in Bratislava to study at the Faculty of Natural Sciences. Perhaps being affected by natural beauty of his native district and by the family environment he decided to study natural science and geography, later on geology. In 1947 Dr. Fusán accomplished his university studies.

The world-known scientist and specialist on the West-Carpathians, Academician Dimitrij Andrusov noticed Dr. Fusán's interest, talents and industry, and selected him as his assistant as early as 1945—1947 and superoised him when he wrote his doctor's (RNDr) thesis in 1948. In the same year Dr. Fusán started working in Státny geologickú ústav (National Institute of Geology) where he is still working.

Dr. Fusán's initial work concerned the research of the most intricate tectonic unit of the West Carpathians — the Klippen Belt and adjacent units. The post-war construction boom of our country demanded the solution of diversified theoretical and practical problems, so Dr. Fusán immediately after his start in the institution was appointed responsible for engineering-geological tasks concerning hydroelectric power-stations construction on the Orava, Váh and Hornád rivers, as well as rail-way constructions and economic geology. Since 1951 to 1959 his scientific work was mostly connected with the research of the most significant metallogenic area — the Spišsko-gemerské rudohorie (ore mountains) and the adjacent part of the Cierna Hora Mts. His endeavour, aimful and systematic work associated with his admirable, characteristic optimism enabled him to overcome many troubles of those times and he always participated in every constructive idea concerning the new-forming Slovak geology. His initiating work on the Paleozoic and Mesozoic lithostratigraphy, tectogenesis, associated with geological mapping is still highly valued. His researches resulted in the first at all published geological map 1 : 100 000 of the Spišsko-gemerské rudohorie (ore mountains) representing the basis for further researches. In 1962 Dr. Fusán presented his thesis for the CSc. degree. The thesis dealt with the problems of the Spišsko-gemer-

ské rudohorie Mts. Because of his extensive experience on applied and regional geology, exactness of his geological mapping, Dr. F u s á n was appointed editor-in-chief of general geological maps 1 : 200 000 of Czechoslovakia for the Slovak territory, and editor of the Vysoké Tarty Mts., Rimavská Sobota map sheets and co-editor of map sheets Zvolen and Trebišov. For that purpose Dr. F u s á n mapped the area of the Čierna Hora Mts. and partly the Branisko Mts. This collective work of Czechoslovak geologists was honoured by the Order of Republic and by the Plaque issued on the occasion of the 20th Liberation Anniversary. This was a significant turnover in the development of geological sciences in our country, owing to Dr. F u s á n's and others' meticulous work and brain which must still be particularly valued. In the time after the accomplishment of the general maps Dr. F u s á n was editor-in-chief of the Slovak part of the geological map 1 : 500 000 of Czechoslovakia and of the Tectonic map 1 : 1 000 000 of Czechoslovakia.

The Member-correspondent of Slovak Academy of Sci. Dr. F u s á n highly contributed to Slovak geology by his researches of the Tertiary sediments substrate and deeper parts of the Earth's crust. Owing to his sense for team work he has become an outstanding Czechoslovak specialist on interpretation of not only regional-geological data but also on geophysical methods. Close cooperation between geologists and geophysicists resulted in a work presenting the picture of morphostructures and geologic structure of the substrate of the Central-Slovak neovolcanics which in the past decade were and still are paid particular attention in respect of mineral resources prognoses. Dr. F u s á n dealt with the theme in detail in his Doctor's dissertation in 1970. Then he was awarded the degree of Doctor of Sciences (DrSc). Recently Dr. F u s á n has been treating the deep and block structure of the West Carpathians. The results of researches (associated with the map of substrate and relief) are presented in collective synthesizing monograph called "Pre-Tertiary Substrate of West Carpathians", published in 1987 by D. Štúr Institute of Geology. Dr. F u s á n's contribution to the Carpathian geology is well known at home and abroad from almost hundred publications, frequently surpassing the regional meaning. His popularization- and social work is equally meritorious. In his "Geology of Slovakia" Dr. F u s á n acquainted a broad public with the geologic structure of the West Carpathians in "Slovakia II — Nature". He also participated in the compilation of the "Encyclopedia of Slovakia", issued by the Slovak Academy of Sciences, and in the compilation of the Encyclopedical Dictionary of Geological Sciences (Vol. 1 and 2). At present Dr. F u s á n works on the book "Malá vlastiveda" as co-author.

Dr. F u s á n's scientific-organizing activities: immediately after the Liberation when large-scale geological survey of Slovakia started its development, Dr. F u s á n actively participated in all organizing works. In the Dionýz Štúr Institute of Geology he passed through all levels, from the ordinary employee through head of department, head of the regional research department (1964—1968), deputy director (1968—1969) to director (1969—1976). He is member of many special and scientific commissions and institutions, of national and state authorities.

In 1964—1966 Dr. F u s á n was Secretary of the Carpathian-Balkan Geological Association for Czechoslovakia. After a short break he took the post again and kept it up to 1986. In 1973—1977 he was President of CBGA. In

1980—1985 he was Chairman of the Czechoslovak National Geological Committee, and 1981—1986 Chairman of Problem Commission IX of the multilateral cooperation of Socialist academies of sciences. He had for long been member of the College of sciences on Earth and Universe at the Slovak Academy of Sciences. In 1983 he was appointed its chairman. He also is member of the College on geology and geography of the Czechoslovak Academy of Sciences and member of many scientific and editorial boards. For long, Dr. F u s á n has been active member of the Slovak geological Society. In 1978—1981 he was its president.

Besides his research and organizing-scientific activities, Dr. F u s á n also participated in education of specialists. In 1958—1961 he read lectures at the Faculty of Natural Sciences of the Comenius University on historic geology, supervised students working on their dissertations. He still educates aspirants for higher academical degrees in geology and until 1985 he also presided the Commission for defence of candidate dissertations. At present he is member of the same Commission and of the Commission for defence of doctor theses.

For his merits Dr. F u s á n was honoured with several state distinctions.

In 1978 he was elected member-correspondent of the Slovak Academy of Sciences.

Modesty and optimism, associated with his characteristic smile, his sense for honour and collective work are prominent and exemplary features of Dr. F u s á n's personality. He generously offers his rich special experience and knowledge to his colleagues and welcomes every rational idea. By the results of his work he is ranged among significant specialists on the West Carpathians, and recognized to be an outstanding specialist on geophysical interpretation. His personal characters mentioned make of him a paragon of scientist and as man with particular sense for justice and humanity.

Friends, colleagues and all the geological public wish Dr. F u s á n the best health, — personal happiness and many further successes in his creative work.

O. Samuel
