

Fig. 5.

AMV-specific polypeptides generated in the cell-free system or in host cells resolved on a SDS-polyacrylamide (15 %) slab gel

I — 30 — 40 S AMV-RNA was translated in standard reaction mixture and products were immunoprecipitated with anti p27 serum.

II — lysate of pulse labelled myeloblast was immunoprecipitated with anti p27 serum.

III — lysate of pulse-chase labelled myeloblasts was immunoprecipitated with anti p27 serum. Photograph of X-ray film after fluorography of the dried gel.
